Wayne Dalton Introduces 3-Inch-Thick Commercial Sectional Door

ThermoMark™ 530 Ranks as One of Market's Strongest, Most Thermally Efficient 3-Inch Doors

LEWISVILLE, Texas (May 20, 2013) – Wayne Dalton dealers have a new answer for commercial sectional customers seeking advanced levels of climate control and durability: the ThermoMark™ 530.

Wayne Dalton's first 3-inch-thick, polyurethane-insulated commercial sectional door is designed to deliver optimal performance in environments subject to extreme heat and cold. Manufactured with sections that are filled with high-density CFC and HCFC-free polyurethane foam, it is rated one of the strongest and most thermally efficient doors on the market.

"We waited to introduce a 3-inch-thick insulated commercial door until we knew we could exceed the market's expectations, and that's just what we did with the ThermoMark™ 530," said Karen Cohen, senior product manager at Wayne Dalton. "It carries the highest thermal performance values published among major U.S. manufacturers of 3-inch insulated commercial sectional doors, and its joint profile creates a virtually impenetrable path for air leakage between sections."

The ThermoMark™ 530, the newest addition to the ThermoMark™ line, is recommended for facilities that require high levels of thermal efficiency because it carries an R-value of 26, a U-value of .038 and a tested installed U-factor of .14. Additionally, it includes a PVC thermal break that limits heat and cold transfer from front to back of the end stile, as well as perimeter seals and barriers that a third-party test found allowed air infiltration of only .09 cfm/sq. ft. at 15 mph.

Ease of installation is an additional design feature of the ThermoMark™ 530. Continuous steel strips run the width of each section, which not only allow for hinges to be placed anywhere, but also enable an easier center mount of a trolley operator. Making installs even easier, the sections can be cut to size in the field for quick service and the ability to inventory sections for replacement calls.

The door is designed especially for agricultural buildings, food and beverage storage, climate-controlled facilities, grocery and pharmaceutical facilities and similar applications. It is also available in four standard color options – white, brown, taupe and almond (standard) – and with several window options.
