FOR IMMEDIATE RELEASE

WAYNE DALTON EARNS ICC-ES BUILDING PRODUCT LISTING

LEWISVILLE, TEXAS (January 25, 2016) – The Wayne Dalton Model 800C ThermoTite™-insulated rolling steel door added an IECC Air Infiltration option that recently received a building product listing (ESL# 1017) from ICC Evaluation Service (ICC-ES), providing evidence that the 800C with IECC Option meets specific consensus standards requirements in the I-codes. Building officials, architects, contractors, specifiers, designers and others utilize ICC-ES Building Product Listings to provide a basis for using or approving (product) in construction projects under the International Building Code.

ICC-ES President Shahin Moinian explains why ICC-ES Building Product Listings are so important. “Wayne Dalton can now reference the building product listing to ensure building officials and the building industry that the product meets the requirements of consensus standards referenced in the I-Codes,” Moinian said. “Building departments have a long history of using evaluation reports and can now also rely upon ICC-ES listings. ICC-ES operates as a technical resource with the highest quality of product review for the building department. Final approval of building products is always in the hands of the local regulatory agency.”

ICC-ES thoroughly examined Wayne Dalton’s product information, test reports, calculations, quality control methods and other factors to ensure the product is compliant with the specific consensus standards. “We’re excited to get ICC-ES approval for a new option on one of our most popular models,” said Jennifer Malcuit, rolling steel product manager for Wayne Dalton. “Our 800C door with the IECC option offers thermal efficiency via insulation and perimeter seals, minimizing the transference of temperature and air infiltration.”

A nonprofit, limited liability company, ICC-ES is the United States’ leading evaluation service for innovative building materials, components and systems. ICC-ES Evaluation Reports (ESRs), Building Product Listings and PMG Listings provide evidence that products and systems meet requirements of codes and technical standards. Reports from both listing programs are now accepted in Canada. ICC-ES is a subsidiary of the International Code Council® (ICC®). For more information, please visit www.icc-es.org
