Wayne Dalton® Launches New Sectional Steel CX-Series that Provides Strength, Longevity and Durability to Three New Door Models

The new Sectional Steel CX-Series includes Models CX-20, CX-24 and CX-2400, which deliver quality and value

September 26, 2022 - Wayne Dalton®, a leading manufacturer of residential and commercial door solutions, introduces three new Sectional Steel CX-Series models that offer a highly efficient design for strength and longevity in demanding commercial settings. Launched on September 26, 2022, the new Sectional Steel Models CX-20, CX-24 and CX-2400 are replacing today's C-Series Models C-20, C-24 and C-2400 for non-wind load applications. The new CX-Series remains compatible with the C-Series allowing for section replacements as needed.

“Our goal in launching the new Sectional Steel CX-Series is to provide customers with a wider range of options suitable for a variety of project budgets and building requirements,” said Bill Loughridge, Wayne Dalton Product Manager. “Models CX-20, CX-24 and CX-2400 offer a durable and stable door system for commercial and industrial applications.”

Each of the three models in the Sectional Steel CX-Series offers customers a more efficient pan door design. The series' attributes include an enhanced low-maintenance design and steel and polylaminate backer options that allow for a wider variety of commercial and industrial applications for warehouses, industrial manufacturing facilities, storage buildings and distribution centers, among others.

All models still include many of the proven features customers have come to know and appreciate in the C-Series product platform; the quick installation and impact sections, R-value* of 7.64 for optional insulation and Wayne Dalton one-year limited warranty. At its core, the

Sectional Steel CX-Series incorporates tongue-and-groove construction with self-forming rivets clinched to face, and rails for superior stability throughout the door.

For more information on the new Sectional Steel CX-Series, visit wayne-dalton.com.

*Wayne Dalton uses a calculated door section R-value for its insulated doors.
