Wayne Dalton Introduces DaltonDock™: A New Era in Dock Solutions

Cutting-edge equipment line redefines loading dock standards with its superior build and user-centric design

April 10, 2024 - Wayne Dalton®, a leading manufacturer of residential garage door and commercial door solutions, has unveiled its latest innovation, the DaltonDock™ equipment line. As a total dock and door solutions provider, Wayne Dalton ushers in a new era of modern dock equipment characterized by unmatched safety, durability and usability.

The DaltonDock™ series introduces the Mechanical Pit Leveler and the Edge of Dock, various Seals and Shelters, as well as an extensive array of accessories, all engineered to fortify the loading dock experience. The Mechanical Pit Leveler and the Edge of Dock are meticulously crafted to meet the stringent ANSI MH 30.1 specifications and incorporate advanced safety features, ensuring they withstand the demands of a wide range of loading dock environments.

“This new dock product offering can be seamlessly paired with a Wayne Dalton door, reinforcing our position as a one-stop solution provider for loading dock applications and emphasizing our commitment to providing integrated solutions that meet the evolving needs of our customers,” Wayne Dalton® Technical Sales Manager Tim Wolfe said. “We’ve meticulously designed each component of the DaltonDock™ line to ensure that our clients experience enhanced safety, reliability and ease of use, without compromise.”

The Mechanical Pit Leveler, a standout in the DaltonDock™ series, offers a seamless building-to-truck transition, featuring innovative pit height adjusters that eliminate the need for

manual shimming under the pit. Its adjuster feet quickly align with the dock floor height, enhancing worker protection by removing the need for installers to work underneath the leveler.

The Edge of Dock leveler stands out for its easy to push/pull operating handle. Both the Mechanical Pit Leveler and the Edge of Dock come standard with a unique textured powder coat, providing superior traction and resistance to slippage compared to traditional coatings.

In addition to these, the DaltonDock™ line includes an array of Seals and Shelters, constructed from fire-retardant foam and UV-resistant fabrics. These are designed to bolster dock seal and protection, particularly against harsh weather conditions, thereby improving working conditions and reducing energy costs. Complementing these innovations, the line also features an extensive selection of accessories, designed to augment and enrich the dock's functionality.
