### **Wayne Dalton™ Launches New Hydraulic Dock Leveler**

LEWISVILLE, TX. July 14, 2025. –Wayne Dalton™ is introducing new hydraulic dock levelers: Models H68WD and H78WD, which were designed with durability, safety and ease of installation in mind. Built for demanding environments, these models are the latest additions to the brand’s expanding dock equipment lineup and further reinforce its position as a Total Solutions Partner. With a range of exclusive design elements, the H68WD and H78WD models set a new standard for performance and installer-friendly functionality in the field.

Wayne Dalton engineers took in consideration safety features to bolster the hydraulic dock leveler while maintaining ease of set-up processes for installers. Both models come standard with a textured powder-coat finish, three-wheel support bracing and removable full range toe guards. The building-to-truck transportation, a forethought for forklift operators, was designed for smooth product shifts.

“Our X frame design provides a much cleaner pit design than others in the industry,” Technical Sales Dock Manager Tim Wolfe said. “Unlike other hydraulic dock levelers, installers only place shims under the main cylinder, adjustable lip keepers and maintenance brace.”

To ensure maximum performance and safety, the hydraulic lift cylinder is mounted to the center of the unit. Installation is facilitated by cutouts on the rear hinge, which identify fillet weld locations.

“Our deck-to-beam weld coverage is an industry-leading 34%, ensuring long term durability,” Dor Gamliel, dock product engineering manager, said.

(more)

The stability of lifting the levelers from a truck is insured by four steel fork loops bolted to the deck. These loops allow chain lifting with forklifts, whether from the interior or exterior of the building, which eliminates sliding when the levelers are stacked.

These features keep processes steady and safe. The top side adjustable leveling bolts quickly position the hydraulic dock leveler with the building floor, requiring no shimming or welding at the rear of the pit.

Models H68WD and H78WD are available in 30k, 35k, 40k and 45k Comparative Industry Rating (CIR) capacity, and are ANSI MH30.1-2022 certified. When purchased with a Wayne Dalton™ commercial door, these models are backed by an enhanced two-year limited warranty.
