Spear

FEATURES

Pinch-Resistant Door Panels

Designed to push fingers out of harms way.

Foamed-In-Place Polyurethane Insulation

Provides thermal efficiency with a U-factor* of 0.29 and an R-value** of 10, helps block street noise and makes the door operate more quietly.

Bottom Weather Seal

This bulb shaped seal blocks draft and debris from entering the garage.

Wind Load Options

Available with structural reinforcements for use in coastal or high wind region.

*U-Factors are based on independent testing and verified per ANSI/DASMA 105. For products other than aluminum full-view doors, testing was conducted on specific sizes of solid doors. Actual thermal performance may vary by door size and configuration.

**Wayne Dalton uses a calculated door section R-value for our insulated doors.

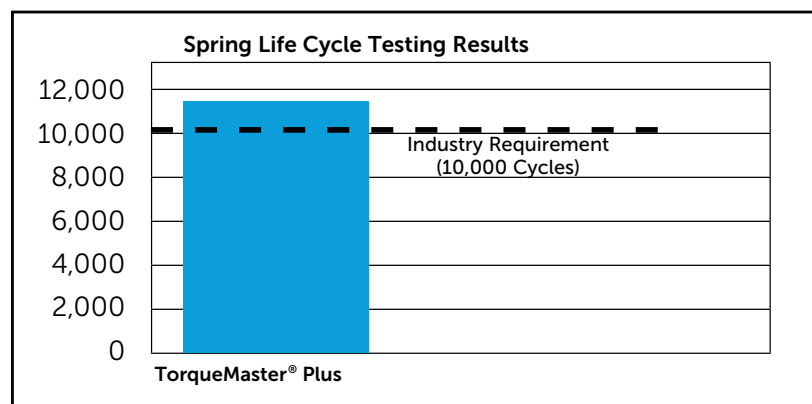

TorqueMaster® Plus

COUNTER BALANCE SYSTEM

The TorqueMaster® Plus design helps prevent injury to the installer or homeowner that could result from the accidental release of tension and includes an anti-drop safety device. If a spring should happen to break while the garage door is in the up position, the anti-drop device will stop the garage door from going into a free fall. Our exclusive counterbalance system can provide you safety and a more polished appearance.

On average TorqueMaster® Plus exceeded the industry requirement by 15%.

Wayne Dalton has cycle tested more than 250 TorqueMaster® Plus springs. These tests show the average TorqueMaster® Plus spring life cycle exceeds the minimum cycle life of 10,000 cycles specified by ANSI/DASMA 102.

*Certain door configurations require standard torsion or extension springs. Please work with your dealer on requirements for spring types based on door configuration.

THERMAL PERFORMANCE

Wayne Dalton participates in the DASMA Thermal Performance Verification Program. The program verifies the thermal performance of sectional garage doors. The lower the U-factor rating, the better the thermal performance.

Symbol indicates verified U-factor rating in accordance with the DASMA Thermal Performance Verification Program.
